

GRUPO FERSIL

Grupo Fersil has consolidated in the last 35 years of history as a leader in piping systems in Portugal and in Central and East Africa

Grupo Fersil is dedicated to creating, developing and manufacturing plastic pipe systems for the construction of buildings , works of infrastructure , agricultural irrigation systems , gardening and household and technical and industrial applications. With three production centers spread across two continents , the Group companies are distinguished by quality, innovation and ethical business practices in the countries where they operate and market its wide range of products .

Grupo Fersil began his career with the company in 1978 with FERSIL - Freitas & Silva , Lda , joined five years later by IBOTEC Indústria de Tubagens with a view to expand its market share . In order to continue the path of success and strengthening its position in Africa , the Group opened in 2007 , a new modern plant in Angola , FIL - Tubos Angola , Lda , having emerged five years later , the Fersil Moçambique , Lda. In the view of the complementarity of the Group companies and in response to the demands of the process of product distribution in 2009 was created Themagua – Exportação e Importação.

Africa emerged naturally in the expansion strategy , as an alternative market , not only by existing ties with the African people , but by the emerging need for infrastructure , which led to the creation of several programs for water supply and sanitation in populations as well as the encouragement of irrigation projects that are the mainstay of growth of food production . With the growing contribution of African markets , reduced dependence on the Iberian market , which has overcome the crisis in the construction sector that hit this market .

FERSIL

FERSIL Freitas & Silva , SA, since 1978 is the leading Portuguese company in the production of pipes and fittings in plastic materials .
